

Public Water Supply (PWS) & Inventory Information	
PWS Name:	Town of Rosepine
PWSID:	1115028
Enter Date Planned to Report to LDH:	10/1/2024
Is this the Initial Inventory or an Inventory Update?	
PWS's Preferred Point of Contact	Name: Mike Numbers
	Phone: 337-226-9448
	Email Address: mike@townofrosepine.com

Part 1: Historical Records Review	
Type of Record	Describe the Records Reviewed for Your Inventory
1. Previous Materials Evaluation <i>Example: Locations of Tier 1 lead tap sampling locations that are served by a lead service line.</i>	
2. Construction Records, Ordinances, and Plumbing Codes <i>Examples: Codes, Ordinances or rules of services that prohibited lead piping, permits for installing or replacing service lines.</i>	
3. Water System Records <i>Examples: Capital improvement plans. Standard operating procedures. Engineering standards.</i>	
4. Distribution System Inspections and Records <i>Examples: Distribution system maps. Tap cards. Service line repair/replacement records. Inspection records. Meter installation records.</i>	
5. Other Records	

Part 2: Identifying Service Line Material During Normal Operations	
1. During which normal operating activities are you collecting information on service line material? Check all that apply.	
Water meter reading	Water main repair or replacement
Water meter repair or replacement	Backflow prevention device inspection
Service line repair or replacement	Other
If "Other", please explain:	
2. Did you develop a policy or standard operating procedure to collect service line materials during routine activities?	
Yes	No
If "Yes", please describe:	

Part 3: Service Line Investigations	
1. Identify the service line investigation methods your system used to prepare the inventory (check all that apply). If a water system chooses an investigation method not specified by the state under 40 CFR §141.84(a)(3)(iv), state approval is required. Note that investigations are not required by the LCRR but can be used by systems to assess accuracy of historical records and gather information when service line material is unknown.	
Visual Inspection	Predictive Modeling
Customer Self-Identification	Statistical Analysis
Mechanical Excavation	Other
Vacuum Excavation	
If "Other", please explain:	
2. If the system utilized Predictive Modeling or Statistical Analysis, please briefly describe the process below:	

Part 4. Inventory Summary Table 1		
When you are using the Service Line Information worksheet, the classifications in the Column "Material Classification for the Entire Service Line" (Column M) will be used to calculate the total number of service lines for each of the four material classifications below.		
Service Line Material Classification	Definition	Total Number of Service Lines (REQUIRED to be reported under the LCRR)
Lead	Any portion of the service line is known to be made of lead.2	0
Galvanized Requiring Replacement (GRR)	The service line is not made of lead, but a portion is galvanized and the system is unable to demonstrate that the galvanized line was never downstream of a lead service line.	0
Non-Lead	All portions of the service line are known NOT to be lead or GRR through an evidence-based record, method, or technique.	990

Lead Status Unknown	The service line material is not known to be lead or GRR. For the entire service line or a portion of it (in cases of split ownership), there is not enough evidence to support material classification.	0
TOTAL		990

Notes

1 This summary table is for reporting material for the entire service line connecting the water main to the customer's plumbing. Remember that systems must track the system-owned and customer-owned portions separately in their inventory.

2 A lead-lined galvanized service line is consistent with the definition of an LSL under the LCRR ("a portion of pipe that is made of lead, which connects the water main to the building inlet") (40 CFR §141.2) and must therefore be classified in the inventory as an LSL. Do NOT, however, count non-lead service lines with a lead gooseneck or pigtail as lead service lines.

Part 5. Public Accessibility	
How are you making your inventory publicly accessible? Check all that apply. <i>Remember that if your system serves > 50,000 people, you must provide the inventory online.</i>	
Interactive online map	Printed tabular data
Static online map	Information on water utility mailings or newsletter
Online spreadsheet	Hard copy information available in water system office
Printed service line map	Other
If "Other", please describe:	
Town Website page	
If the inventory is available online (i.e., system's website, etc.), provide a link to the website below:
